

MAHLE PREMIUM SELECT

A new generation is being launched

CUSTOMER INFORMATION

INDUSTRIAL
FILTRATION

MAHLE PREMIUM SELECT

Anyone who demands high quality in the field of hydraulic filtration has encountered MAHLE Premium Select elements for years. Up to 3 glass fibre layers, optimally coordinated to each other, result in a dirt holding capacity that is increased up to 30 % in comparison to conventional filter elements. At the same time, increased filtration performance combined with a lower differential pressure achieves a significantly reduced energy consumption.

PERFECTION - DEVELOPED FURTHER

In combination with our optimized glass fibre technology, the new shrunken outer sheath ensures a unique structure of the PS filter element, resulting in first-rate filtration. The patent-pending outer sheath fastens the pleated star closely to the inner core, guaranteeing uniformly high separating performance throughout the entire service life of the filter element. This allows an ideal compensation of the rise in differential pressure due to the technology and pulsations which may occur, triggered by changing volume flows. Fluctuations in separating performance (β -values) are now a thing of the past. The negative effects of short-term back-flows in the filter element on the separating behaviour can be better absorbed as a result.

PRODUCT INTRODUCTION STARTED

We are pleased to inform you today, that the series production of the next generation of Premium Select Elements has started. The conversion of the production will be implemented gradually depending on types. We planned, that the conversion of the complete product range will be finished within the next 6 month. During this time mixed deliveries may occur occasionally. We appreciate your understanding.

If you have questions, feel free to ask your known contact from our internal and external sales teams.

MAHLE sells its Industrial Filtration division to the Filtration Group

Subject to anti-trust approval, the Filtration Group, with its headquarters in Chicago, USA (www.filtrationgroup.com), a subsidiary of Madison Industries, is taking over the Industrial Filtration division from MAHLE.

Last autumn, MAHLE announced that it wanted to withdraw from the industrial filtration business. Around the world, about 900 people are employed in this division. The Industrial Filtration business, whose products are needed in many areas such as in industrial plants and also in the production of food, has little in common with the main features of MAHLE's core business, the automotive industry. "We are pleased to have found a buyer in the Filtration Group, who can develop our industrial filtration business further thanks to their expertise and size," explains Wolf-Henning Scheider, Chairman of the MAHLE Group Board of Management.

The aim of the company acquisition is to expand and develop the further development of the industrial filtration business. With the acquisition, the Filtration Group is expanding its product portfolio and strengthening its presence in the German market. "We are very happy to have the know-how and technical competence of the employees, who have built up a really remarkable business," stresses Steve Felice, Chairman of the Filtration Group.

COMPANY PROFILE

The Filtration Group serves a very varied group of customers with filter solutions in the areas of health, process technologies and in liquid and ambient air applications. With first-class development and production locations around the world, the Filtration Group supplies its customers from 80 locations in 20 countries.

Additional information about the company and its products can be found at www.filtrationgroup.com

WHAT DOES THIS MEAN FOR YOU AS CUSTOMER?

If the anti-trust authorities consent to the sale, initially nothing will change for you as our customer. You will still be able to rely on your known contact partners in office and field sales. You will also continue to receive high quality products.

The only change you could expect from a takeover by the Filtration Group is a considerably expanded product portfolio that you as customer can directly profit from.

As soon as there are developments in the sale process, we will immediately inform you. If you have any questions in the meantime, you can contact our employees in office and field sales.
